Salt Lake Cy.
Feb. 22, 81.

Dear Sir

Your favor with names of Sundry species is at hand. Thanks.

I send you $10.90 for the two volumes of Bot. Cal.

Please send the Vol. I. to my friend, Prof. R. W. Traver of Iowa College, Grinnell, Iowa and Vol. II. to me at Salt Lake City. (The College loaned me Vol. I. for my use in the West, and as they have need it much I want to replace it by a new one and keep the old one.)

I have the Flora N. A. Part I of Gray but I want all the rest as soon as out, and you may put my name down as a

sent you recently, please send them.

Very truly Yours,

Warren E. Jones.

subscribes.

When Parry & Engelmann were here they told me to write to you and Gray for your Synopses of Oenotheas, Potentilloid Liliaceae, etc. and all of Gray's recent studies. Dr Gray sent me all of his, and made a promise for you that you would send me yours when you returned, but I suppose he omitted to mention it to you.

If you will send me such of your studies as do not occur in the two Vols. of Bot. Cal. or Gray's Flora, I shall be glad to return the postage and whatever you may think necessary.

I have several new species which I will endeavor to send you soon, with the names which I have given them.

The plant which you think "looks like Hy mopterus anisatus" but without fruit, has the odor of that plant, but it is much different in habit and grows in the clefts of rocks in the mid region of St George. It anisatus, if my determination is correct, is a plant growing only on the mountain tops at an elevation of 10000 – 11000 feet. I hope I may get good fruit of the plant and so settle the doubt. I have splendid fruit of many [illegible] from Fresco.

Your determination of 1620 differs from mine. I at first thought it to be Astragalus Nuttallianus but fruiting study led me to think it was A. nothoxys. The one called pod seemed to preclude its being A. Nuttallianus.

If there is anything in the list I
